

Al Amthal product wins certification

MANAMA: Bahrain-based technology and information services provider Al Amthal Group has announced that its Optimum ERP product has received the Microsoft Certification for Windows Server 2008 R2.

It is the first GCC-developed product of its kind to receive this certification, the company said.

Optimum ERP is a robust suite of business solutions addressing the financial, trade and human resources management needs of organisations across multiple industry sectors.

The Certified for Windows Server 2008 R2 designation is for line-of-business and mission-critical applications and demonstrates that Al Amthal's solutions meet Microsoft's highest technical bar for stability, security, reliability, availability, Windows fundamentals and platform compatibility. This gives customers increased confidence in the application from the outset.

The certification has also earned Al Amthal the Hyper-V designation, which demonstrates that its solutions have passed Microsoft's mission-critical standards for a virtualised environment.

"We are delighted to announce that our flagship

Optimum ERP has received this internationally recognised certification," said managing director Hani Awachi.

"What is even a greater source of pride is that it is the first locally developed product of its kind to receive this certification. This goes a long way towards underscoring the strength, reliability and security of our solutions and the benefits they offer to the world-class organisations we serve.

"We are proud of this achievement and the hard work and dedication of our team, whose experience and

know-how continue to underpin our growth in the region and our ability to effectively service an expanding list of blue-chip companies in the GCC and broader Middle East region," he said.
